

## Continuous Quality Improvement (CQI) Module

Gain greater control and transparency of the review of quality care and performance with ImageTrend Elite's Continuous Quality Improvement (CQI) module. Each reviewer and incident have their own status, allowing administrators to track each throughout the review process.

### Agency Driven Quality

Questions developed by your agency or department are used to prompt reviewers during evaluation of the incident. When an issue is discovered, the reviewer can send messages to pertinent crew or other users for resolution.

### Example Questions

- Initial cardiac rhythm noted?
- Spontaneous circulation noted?
- Termination of resuscitation noted?
- Defibrillation initiated in appropriate time frame?
- Narrative entered and complete?

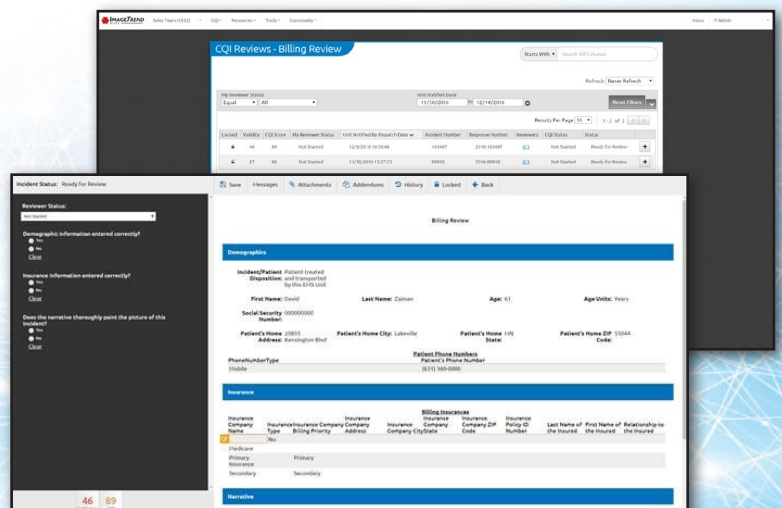

### CQI Forms

Because only portions of the form are displayed for reviewers in a read-only format, they can focus on just the necessary information to complete their task which both saves time and minimizes exposure of sensitive patient data.

### CQI Score

The CQI score, visible on a CQI review, uses the module's rules and the incident data to indicate if the incident fulfilled performance measures. For example, the rules can assign scoring based on whether a 12 lead was done within 10 minutes of on scene time.
