

Connect EMS and the ED

Streamline communication between medical personnel working in ambulances and hospitals. Hospitals prepare for incoming patients while EMS services receive outcome data. Improve patient care and better prepare for inbound patients with Hospital Hub™.

Increase Hospital Readiness

Prepare for incoming patients with PCR's prior to patient arrival and maintain overall situation awareness. Allocate resources as needed for daily events and MCI's, save time and reduce data entry errors.

Gain Knowledge with Outcome Data

Understand how pre-hospital care impacts a patient's outcome. Provide hospitals with ePCR's during transport and receive outcome data to use for trending, benchmarking and reporting.

Better Billing

Hospital and EMS data is combined into a single record that can be submitted for billing.

Automated Communication

- Information recorded in the field automatically communicates to Hospital Hub
- Hospital Hub displays incoming patient information
- Includes condition, assessments, history, procedures and medications
- Quick view available in emergency rooms
- Increase the amount of time medical staff will have to respond and provide optimal care

Hospital Hub is a resource to make safe, easy data sharing a reality for healthcare and emergency services organizations.
