

IMAGE TREND® ENVOY™ FOR CORONERS

Complete Case Management for Coroner & ME

Envoy is a web-based case management solution specifically focused on managing coroner cases.

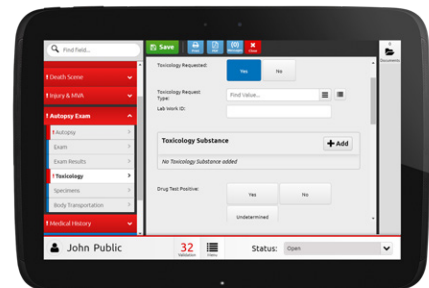

Simplify Documentation

ImageTrend Envoy gives coroners, medical examiners, epidemiologists and administrators the power to electronically collect and report on all deaths within their region. Even better, Envoy allows users to document data offline when an internet connection isn't available. Envoy eliminates the need to sort through paper records and manually report the data, saving countless hours of work and allowing users to be more efficient and productive.

Key Features

-  Include data fields specific to your agency
-  Add attachments to cases, and preview what's attached instead of downloading each time
-  Utilize pre-defined medical history (ICD-10 codes) and medication lists (RxNorm)
-  Dynamically ensure required data is entered before the case is closed
-  Display fields based on entered data using "smart" technology
-  Capture digital signatures in the field
-  Integrate CAD data

Report

Near-real time, ad-hoc reports will exceed your expectations, adding benefit beyond data collection and aggregation. Schedule regularly generated reports to stakeholders and data consumers, and quickly and easily create ad-hoc reports for coroner verdicts, investigation, internal reviews and more.
