# CONTINUUM®

## Active Data Monitoring™

Continuum actively analyzes the data within your system as it is added or updated to provide you with notifications and easy-to-view insights based on the information you need. Best of all, no reports to build. It's that easy.

## Domains and Dashboards

Continuum Domains consist of topical content and are displayed on dashboards consisting of charts, tabular reports and maps to provide instant visual insight. Each dashboard has filtering capabilities such as timeframe, agency/department and a variety of other adjustable criteria in order to meet your organizational needs.

Continuum focuses on multiple datasets such as EMS, fire, inspections, occupants, community health, patient registries, dispatch, certifications, hospitals and more. A sampling of the Continuum Domains that are available for EMS, fire and hospitals include:

**EMS:** Patient Offload Times, Overdoses, At Risk Populations, Public Health, EMS Board Reports, Clinical, Cardiac, Stroke, Trauma, and more

**Fire:** Fire Board Reports, Incident Types, Aid Given/Received, Fire Loss/Saves, Casualties, Response Performance and more

**Hospital:** Trauma, Stroke, Cardiac and more

## Alerts

The Monitors in Continuum analyze and track trends to provide near real time alerts and insight to clinical or operational metrics of your choosing. You can select from our library of ImageTrend created Monitors or create your own. You choose who will receive the alert, near real-time or scheduled, via text or email.

## Performance Insights™

Performance Insights within Continuum is a ground-breaking module that brings provider and organization level situational awareness through industry trends, clinical and operational metrics, incident specific detail and patient interactions. Simply put, it's a report card, but it offers more value with near real-time insights that allows proactive continuous performance improvement.

## Playlists and Shared URLs

Continuum offers you the ability to create playlists featuring charts, tabular reports and/or maps from a variety of different dashboards to be shared both internally and/or publicly for your stakeholders on monitors at your stations, offices, internal/external websites or other locations.

Continuum also offers you the ability to associate URLs with individual charts, tabular reports and/or maps on any dashboard. These URLs can be used to create your own internal or external web pages that show the content they are associated with. Alternatively, URLs can simply be used for creating desktop icons that go right to specific content.

## Predefined Analytics

Continuum delivers predefined analytics built by ImageTrend using industry-wide best practices around specific topic areas. Your data will be transformed into captivating and meaningful graphics, to deliver the awareness and actionable insights to make informed decisions.
