
IMAGETREND® VAULT™

ImageTrend Vault is a solution designed to protect historical NEMSIS v2 patient care data. Vault is a secure and scalable solution, limiting risk and potential data exposure while providing the ability to access when needed.

ARCHIVAL SOLUTION

Securely Retrieve Data Fast

ImageTrend Vault provides a modernized approach to security and data management by limiting archive access to only authorized users. Those users have the ability to perform record searches in Vault to retrieve, view and print individual care reports and attachments. All of the actions are fully logged and auditable for enhanced security.

Reduce Liability

Vault allows you to responsibly store and access your EMS NEMSIS v2 data while limiting risk. Online, permission based access for only those that require it, as well as automatic logging of their actions, provides the extra layer of security you need.

Fulfill Archival Needs

ImageTrend Vault has the features to meet your needs and state requirements.

STORE

NEMSIS v2 report data from XML imports. When importing from an ImageTrend system, custom fields and associated attachments are also stored.

SECURE

Includes secure online access using two-factor authentication, with full audited access logging with a time/date stamp.

SEARCH

Search for individual records by agency, patient name, incident or response numbers, or date range to view and print as needed.
