

HOSPITAL HUB™

Connect EMS and the ED

Improve facility preparedness and overall patient care with heightened hospital awareness. ImageTrend Hospital Hub™ allows EMS to send visual and audible alerts to receiving facilities when enroute with a patient and enables the streamlined communication between medical professionals working in ambulances and in emergency departments.

Increase Hospital Readiness

Prepare for incoming patients with PCRs prior to patient arrival and maintain overall situation awareness. Allocate resources as needed for daily events and MCIs, save time and reduce data entry errors.

Gain Knowledge with Outcome Data

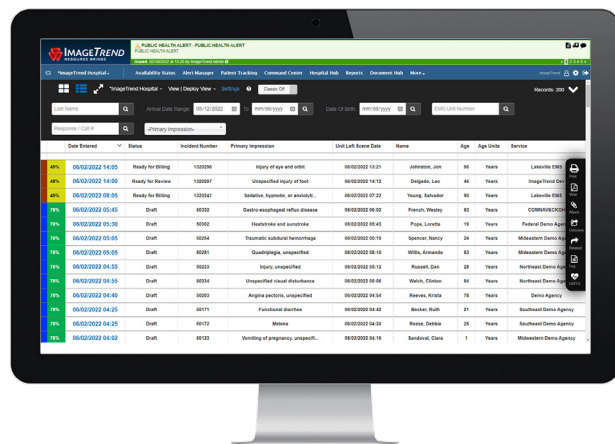

Understand how pre-hospital care impacts a patient's outcome. Share outcome data with transporting agencies and care providers to use for trending, benchmarking and reporting.

Efficient Billing

Combine hospital and EMS data for fast and accurate billing submissions.

Automated Communication

- » Receive alerts for incoming patients
- » View prehospital information prior to patient arrival
- » Access patient conditions, assessments, history, procedures and medications
- » Quick view available for rapid insights in emergency departments
- » Increase the amount of time medical staff will have to respond and provide optimal care

Hospital Hub is a resource to make safe, easy data sharing a reality for healthcare and emergency services organizations.
