

# IMAGE TREND® ENVOY™ FOR STATES

## Complete Case Management for Statewide Coroner & Violent Death Cases

ImageTrend Envoy™ is a web-based case management solution specifically focused on managing coroner and violent death cases. House all demographic, exam and autopsy data, and submit records automatically. Scalable to equip all agencies within a state and configurable to match your enterprise hierarchy.

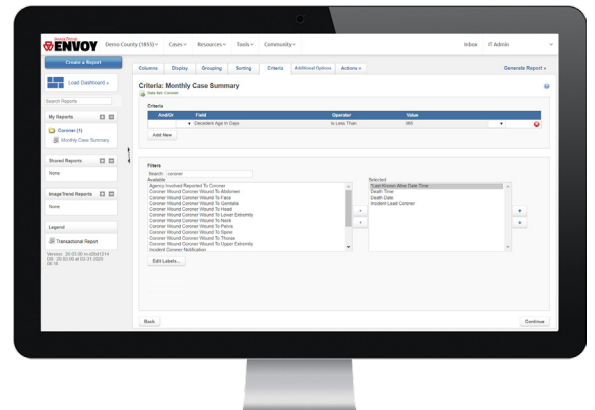

## NVDRS Reporting & Compliance

Envoy gives coroners, medical examiners, epidemiologists and administrators the power to electronically collect and report on all deaths within their state with a single enterprise solution. Map coroner case fields with VDRS fields for complete and accurate records to seamlessly export required data to the CDC. A built-in validation engine ensures the right data fields are being collected, and automated workflows eliminate the need to sort through paper records and create manual reports.

## Key Features

-  Improve workflow and streamline data entry
-  Access electronic coroner records at any point
-  Assign appropriate security permissions
-  Quickly and easily report on all data collected
-  Provide the ability to document offline to all agencies
-  Integrate state toxicology source
-  Integrate with electronic death registry systems

## Dynamic Reports

Near-real time reports will exceed your expectations, adding benefit beyond data collection and aggregation. Data needed for annual reports, coroner verdicts, investigation, internal reviews and more can be reported on quickly and easily – without the need to manually enter data into a spreadsheet. Understand your data at an agency, regional and statewide level, and take advantage of the ability create custom reports to dive into in-depth analysis.

## Why will your agencies love Envoy?

-  Ability to create agency-defined questions
-  Offline documentation
-  Add attachments to cases, and preview what's attached instead of downloading each time
-  Utilize pre-defined medical history (ICD-10 codes) and medication lists (RxNorm)
-  Dynamically ensure required data is entered before the case is closed
-  Display fields based on entered data using “smart” technology
-  Capture digital signatures in the field
-  Schedule reports to auto-generate and send to the state
