

# TREATMENT QUERY

Real-Time Patient Data. Smarter Care.

## Empowering EMS with Instant Access to Patient Records

When seconds matter, EMS providers can't afford to guess. ImageTrend's **Treatment Query** feature gives crews real-time access to a patient's medications, allergies, and medical history—**right at the scene**—all integrated into the documentation process within **Elite™** and powered by the **Health Information Hub™ (HIH)**.

The screenshot displays the ImageTrend Treatment Query interface. At the top, a 'Repeat Patient Search' form allows users to search by First Name, Last Name, DOB, Gender, SSN, Address, Apt #, Postal code, City, and State. Below the search form, a list of 'Repeat Patients' is shown, with a red arrow pointing to the 'Remove Patient From Incident' button. The 'Patient Medical Record Information' section displays patient details: Weddle, Stuart; Gender: Male; DOB: 01/01/1981; Age: 39. The 'Current Medications' section lists two medications: glipizide-metFORMIN (METAGLIP) 5-500 MG per tablet and simvastatin (ZOCOR) 10 MG tablet. The 'Patient Info' section shows the patient's triage classification for MCI Patient: Black - Deceased, Gray - Expectant, Green - Minimal (Minor), and Yellow - ...

## Key Benefits

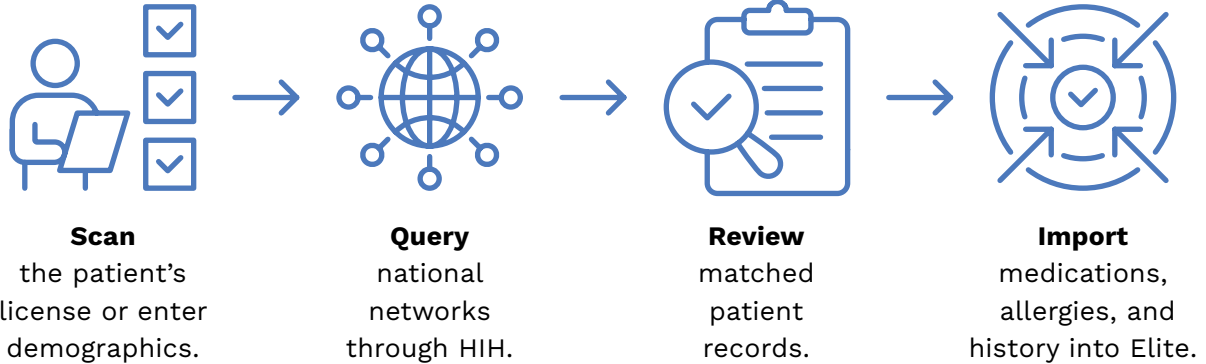

- ✓ **Informed Care at the Scene**  
Instantly access critical patient data to improve clinical decisions, reduce errors, and support faster treatment.
- ✓ **Streamlined Documentation**  
Import medications, allergies, and history directly into Elite, cutting down on manual data entry.
- ✓ **Seamless Workflow**  
Query the network with a driver's license scan or patient demographics, then pull selected data into the report.
- ✓ **Secure, Compliant Access**  
Backed by national interoperability frameworks like Carequality and QHINs under TEFCA.

# TREATMENT QUERY

Real-Time Patient Data. Smarter Care.

## How It Works

## Built on the Power of the Health Information Hub

HIH enables real-time data exchange with hospitals and clinics, bridging EMS with the broader healthcare system. Agencies using HIH for hospital outcome data or alerts can **easily add Treatment Query** to enhance their interoperability strategy.

## Why It Matters

- Enhances patient safety and EMS clinical confidence
- Reduces documentation burden
- Advances EMS agency participation in nationwide health data exchange
- Positions your agency for the future of connected care

## Available Now for Elite + HIH Users

Quick to configure. Easy to use. Ready to elevate patient care.
